What Are Rates and Housing Worried About?

In the past 2 weeks, there's been big news about inflation and seemingly big news about Fed policy. Both are threats to low interest rates, but not just yet, apparently.

After taking last week's huge inflation numbers in stride ([read more...](#)), the bond market moved on to focus on Fed policy this week.

The Federal Reserve (aka, the Fed) is often a source of **confusion** for consumers when it comes to mortgage rates. The evening news says things like "the Fed kept rates unchanged," and people assume it has something to do with mortgage rates.

The Fed Funds Rate (the thing the Fed actually decides to hike, cut, or hold steady) has almost nothing to do with the mortgage market. Mortgage rates are infinitely more concerned with the Fed's **bond buying** policies.

Movement in the bond market is the **foundation** of day-to-day mortgage rate changes. Bonds can move for a variety of reasons, but the most reliable and most basic reason is "supply and demand." By acting as a massive buyer of bonds (including the bonds that directly underlie mortgages), the Fed increases demand relative to supply. Higher demand means higher bond prices, and higher bond prices equate to lower rates, all other things being equal.

In other words, Fed bond buying = lower rates, and they've been buying more than anyone for a long time. Ideally, the Fed won't need to do this forever, but **change is scary** when it refers to the Fed withdrawing support.

It was this sort of change that sparked the **taper tantrum** in 2013, which accounted for some of the most abrupt rate spikes in decades. Markets are understandably cautious about a repeat performance, and market participants **thought** they saw hints about tapering in Wednesday's Fed meeting minutes (a more detailed account of the meeting that took place 3 weeks ago).

But those comments were **nothing** like the discussion surrounding tapering in 2013. Back then, **multiple** Fed members were in agreement, and Bernanke (the Fed Chair at the time) was already on record discussing the conditions for tapering in specific terms.

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	6.43%	+0.02	0.00
15 Yr. Fixed	5.95%	0.00	0.00
30 Yr. FHA	5.82%	+0.02	0.00
30 Yr. Jumbo	6.62%	0.00	0.00
5/1 ARM	6.28%	-0.01	0.00

Freddie Mac

30 Yr. Fixed	6.35%	-0.51	0.00
15 Yr. Fixed	5.51%	-0.65	0.00

Rates as of: 8/30

Market Data

	Price / Yield	Change
MBS UMBS 5.0	99.35	-0.16
MBS GNMA 5.0	99.91	-0.04
10 YR Treasury	3.9039	+0.0424
30 YR Treasury	4.1932	+0.0468

Pricing as of: 8/30 5:59PM EST

Recent Housing Data

		Value	Change
Mortgage Apps	Aug 28	226.9	+0.49%
Building Permits	Mar	1.46M	-3.95%
Housing Starts	Mar	1.32M	-13.15%
New Home Sales	Mar	693K	+4.68%
Pending Home Sales	Feb	75.6	+1.75%
Existing Home Sales	Feb	3.97M	-0.75%
Builder Confidence	Mar	51	+6.25%

This time around, the comments relating to tapering simply reiterated those from various Fed speeches in recent weeks. Not only is the Fed far from unanimous on this front, there's also a lot more uncertainty about when they'll pull the trigger.

Even then, to say the comments were highly conditional would be an **understatement**. See for yourself:

"A number of participants suggested that if the economy continued to make rapid progress toward the Committee's goals, it might be appropriate at some point in upcoming meetings to begin discussing a plan for adjusting the pace of asset purchases."

Translation: the Fed isn't even talking about tapering yet. There are just 4 Fed members who agree they **should** talk about it **in the future if** certain things happen. Pretty logical, actually... The market reaction ended up being logical as well: spooked at first, but quickly calming down.

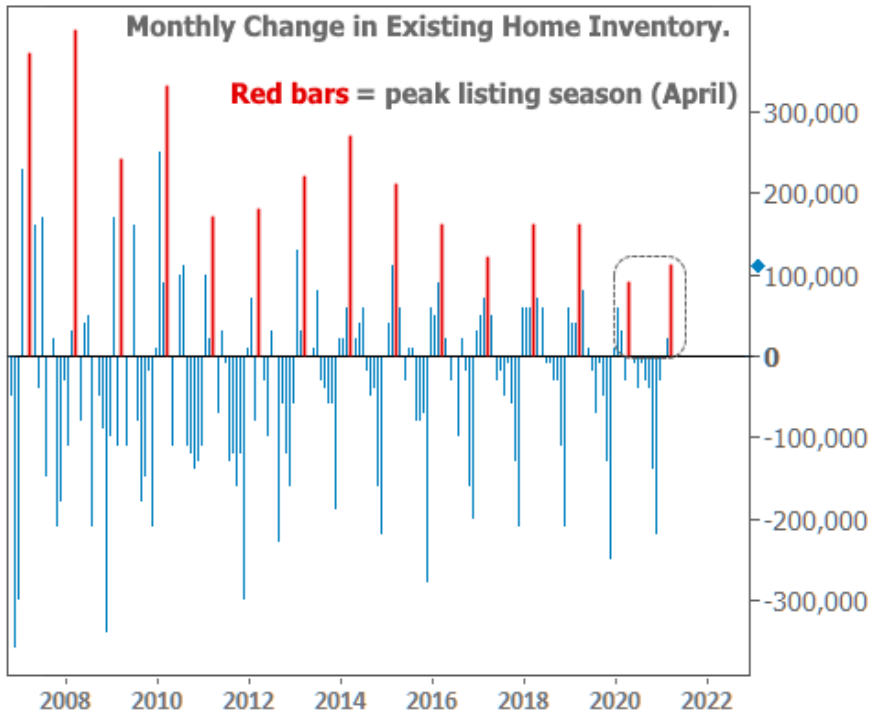

The Fed will need to see **several** months of strong economic data before any robust discussion of tapering. Even then, the pain of the taper tantrum in 2013 means that traders have been gradually getting in position for this discussion for many months. When the time comes, there will be much less to freak out about--at least as far as Fed bond buying is concerned.

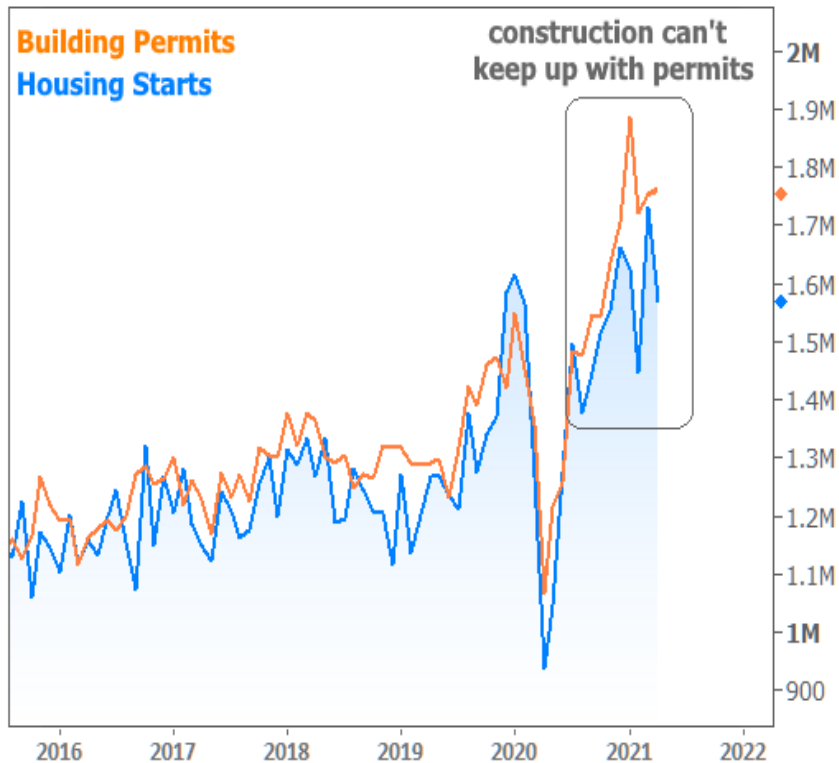

In this week's economic data, Existing Homes Sales moved lower yet again.

How is it that sales keep declining when we're hearing so much about a veritable buying frenzy in many local real estate markets? The explanation has been and continues to be one of **inventory!** The following chart shows the monthly change in existing home inventory. It's a very seasonal thing, and it always peaks with April's numbers (reported near the end of May). Each red bar is April. With this week's report, the past 2 Aprils now stand as the lowest gainers for housing inventory in decades.

But that's for **existing** homes. How about **new** homes? Well... builders are building as fast as they can. Supply chain disruptions, land availability, labor force issues, and price pressures are causing delays. Construction simply can't keep up with building permits.

Service oriented, responsive, competitive rates and an in depth knowledge of todays mortgage market

After completing my degree in finance at the University of Connecticut, I started in the mortgage business right out of college in 2004. With 15+ years of experience and a primary objective of thoroughly explaining all available loan options to my clients with what is typically the largest investment in their lives, I strive to always make myself available. I constantly educate myself with respect to the mortgage industry and underwriting guidelines for FHA, VA, conventional and jumbo financing. I deliver on the expectations discussed up front and provide the service level my clients deserve from day one. I will remain in touch throughout the process and continue to follow up with you after closing. My goal is to wow you and turn you into clients for life. I want you to be so impressed that throughout and after the process you share my information with your friends, family, neighbors and co-workers who may value from my services.
