Rate Spike is Better and Worse Than You've Been Told

Volatility is back with a vengeance since the election--**especially for rates**. Just when it looked like things might be calming down, this week's Fed Announcement resulted in a spike to the highest levels in well over 2 years. As various news outlets rush to cover the story, some have overplayed the drama while others fell short of relaying the true severity of the move.

Bad news first... Rates rose at a **faster pace** this week than you've been told. Major media outlets rely principally on Freddie Mac's weekly rate survey when it comes to covering mortgage rates. This isn't necessarily a bad thing. Freddie's numbers are definitely accurate over time.

The downside of Freddie's data is that it can't keep up with faster changes. Numbers released on Thursday generally capture rate movement that occurs on Monday and Tuesday. That can cause **big discrepancies** between news and reality on weeks where rates make big moves on Wednesday or later.

As it happens, there was a **HUGE move on Wednesday** following the Fed Announcement. This had nothing to do with the fact that the Fed raised rates and almost everything to do with the Fed's accelerated rate hike outlook for 2017-2018.

Remember, markets are always trying to make today's trading reflect future realities. The updated Fed outlook caused a quick reassessment of those realities. The Fed let us know it sees an extra hike in the year ahead, so financial markets adjusted accordingly, as can be seen in the following chart of 10yr Treasury yields (a good proxy for momentum in longer-term rates like mortgages).

National Average Mortgage Rates

	Rate	Change	Points
Mortgage News Daily			
30 Yr. Fixed	6.43%	+0.02	0.00
15 Yr. Fixed	5.95%	0.00	0.00
30 Yr. FHA	5.82%	+0.02	0.00
30 Yr. Jumbo	6.62%	0.00	0.00
5/1 ARM	6.28%	-0.01	0.00

Freddie Mac

30 Yr. Fixed	6.35%	-0.51	0.00
15 Yr. Fixed	5.51%	-0.65	0.00

Rates as of: 8/30

Market Data

	Price / Yield	Change
MBS UMBS 5.0	99.37	+0.02
MBS GNMA 5.0	99.93	+0.02
10 YR Treasury	3.9068	+0.0029
30 YR Treasury	4.1960	+0.0028

Pricing as of: 9/1 7:34PM EST

Recent Housing Data

	Value	Change
Mortgage Apps	Aug 28 226.9	+0.49%
Building Permits	Mar 1.46M	-3.95%
Housing Starts	Mar 1.32M	-13.15%
New Home Sales	Mar 693K	+4.68%
Pending Home Sales	Feb 75.6	+1.75%
Existing Home Sales	Feb 3.97M	-0.75%
Builder Confidence	Mar 51	+6.25%

US Housing Market Weekly

The net effect was roughly 0.125% for 30yr fixed mortgage rates that **did NOT** make it into Freddie's numbers. Here's how they stack up compared to the average lender rate sheets:

Whereas news outlets under-reported this week's mortgage rate spike, they're certainly not making the same mistake when it comes to the big picture rate outlook. Headlines abound proclaiming the '**death of the decades-long trend toward lower rates.**' If you took them at face value, you'd be left with the impression that rates have been falling for 35 years and are now destined to rise indefinitely.

US Housing Market Weekly

Here too, you might want to take the mass media spin with a **grain of salt**. First off, it's not really possible to confirm that a market trend of 35 years has fundamentally changed in just over 35 days. No doubt the current rate spike is one of the **biggest in history**, but that happens from time to time. While this week's volatility does bring rates closer to breaking out of the trend seen in the chart below, you can decide for yourself if it looks any scarier than a few past examples ('88, '93, and '98 especially).

All that having been said, it **wouldn't** make sense to argue that this linear trend will continue forever. It **won't** and it **can't**. Bond yields (aka "rates"), **aren't** like stock prices. They exist in a range. While we may have to periodically adjust our concept of what a normal range might be (thanks to things like negative rates in some countries), rates will never be operating under the assumption that they can move lower indefinitely.

The takeaway here is that the death of the decades-long trend in the chart above is to be expected. That's the important point missing from most analysis on the topic. **Smarter analysis** suggests it's a **better use of our time** to consider what the new range might be as we asymptotically settle in to "the new normal" for rates.

If all this talk of rate volatility has you down, just make friends with homebuilders. Apparently they're nearly as optimistic now as they were at the apex of the housing bubble. November's increase in **Builder confidence** matched its **fastest pace in 25 years!**

Service oriented, responsive, competitive rates and an in depth knowledge of todays mortgage market

After completing my degree in finance at the University of Connecticut, I started in the mortgage business right out of college in 2004. With 15+ years of experience and a primary objective of thoroughly explaining all available loan options to my clients with what is typically the largest investment in their lives, I strive to always make myself available. I constantly educate myself with respect to the mortgage industry and underwriting guidelines for FHA, VA, conventional and jumbo financing. I deliver on the expectations discussed up front and provide the service level my clients deserve from day one. I will remain in touch throughout the process and continue to follow up with you after closing. My goal is to wow you and turn you into clients for life. I want you to be so impressed that throughout and after the process you share my information with your friends, family, neighbors and co-workers who may value from my services.
